

STOCKPILE & PIT VOLUMES

STOCKPILE & PIT VOLUMES

“If you can’t measure, you can’t manage.” The saleable output of amine ends up on a stockpile and the size of this stockpile represent the potential income for the mine. Waste dumps represent a cost of sale and also need to be measured to understand the mine profitability. Pit volumes provide additional information about progress and profitability.

Southern Mapping has programmers to survey these pits and stockpiles on a regular basis, from weekly to annually, providing rapid turnaround of highly accurate volumes for mine management.

ABOUT SOUTHERN MAPPING

Southern Mapping provides LiDAR, Hyperspectral, Thermal surveys and mapping; as well as satellite imagery and associated product and GIS services for a variety of industries and sectors. These include civil engineering and infrastructure development, mineral exploration and mine management, environmental planning and rehabilitation, and urban and agricultural planning.
